

R.A. WEST AMENDMENT DEMO RESULTS- 2020

Overview: AAC Brandon wheat yields were observed under the influence of different R.A. West Int. proprietary amendments including humic acid.

Conclusion: As per being a demo, there is not enough data to bring forth a statistically proven conclusion. However, by simply observing the following graphs the Calpak Foliar treatment yielded highest at 35 bushels per acre and exhibited the lowest test weight at 42 lb/bu. The test weights of all other treated plots ranged from 61-64 lb/bu. Protein content ranged from 10.6% to 14.5%, with Humik Blend 2 representing the former, and Humik Blend 1, the latter.

Seeding Date: May 19

Seeding Depth: 0.75 in.

Seeding Rate: 10 plants/sq. ft.

Harvest Date: Oct. 07

Applications:

May 19: 46-0-0-0 - 150 lb/ac

May 20: Glyphosate - 0.66 L/ac
Heat - 0.035 L/ac
Merge - 0.2 L/ac

June 5: Eclipse A - 0.118 L/ac
Eclipse B - 0.383 L/ac

July 14: G22 - 3 L/ac
F18 - 0.5 L/ac
Microbolt (B) - 0.25 L/ac
Microbolt (Mo) - 14 g/ac
